*“Hypertension Genomics in Black Families:
A Tale of Three Studies, and Counting...”*

Dr. Taylor’s work focuses on the interaction of genomics and social factors that contribute to health disparities in cardiovascular disease among underrepresented minority populations in the United States and abroad. Her current studies examine gene-environment interactions in perceived racism and discrimination, parenting stress, and maternal health on blood pressure of African American mothers and their young children, as well as, the genomics of lead poisoning in Flint, MI.
